

Redux Todo List

Project Brief

This project uses Redux to create an interactive Todo list app.

Your Project

The Todo list app should contain the following functionality:

1. The ability to add items to the list.
2. The ability to remove items from the list.
3. The ability to mark items as completed by crossing them through.
4. The ability to display all items, only items still to do or completed items.
5. The storage of list items in local storage.

Deliverables

The GitHub Pages address for the deployed App.

The GitHub repository address.

Extension

Add extra functionality to the list app (maybe details about the task, percentage completion or other information about the item)
